ALUMINUM PLYDECK

An aluminum frame and plywood platform unit used to support one or more workers or a uniformly distributed load.

- 01

Proscaff Plydeck has one of the best strength/weight ratios.
 - The 0.65m, 1.15m, 1.57m and 2.13m products are tested and rated for 100lbs/sq ft.
 - The 3.05m product is rated for 75 lbs/sq ft.
 - Deeper rail on the 3.05m deck.
- 02

The 180-degree round hooks, not only create a stable working platform but also, due to the rigidity of the connection, enable workers to verify the squareness of the bay.
- 03

The wind latches, located diagonally, provide a tested lift resistance of 24.76Lbs/sq ft for the 3.05m deck that would result from wind with speed of 198 km/h.
- 04

The phenolic coating of the marine board extends the life of the product and the anti-slip profile offers increased stability.
- 05

Edge protection end caps extend the life of the board.
- 06

Ease of maintenance: No rivets! The smart design allows for assembly only with bolts. Reduce your maintenance time and costs.
